# Weather Summary

## Weather:

\*\*\* HIGH RISK for Mixed Dry/Wet Lightning on Saturday across far Northwest Nevada and parts of the Central Idaho Mountains \*\*\*

\*\*\* Near Record Breaking Heat Early Next Week \*\*\*

Temperatures will warm region wide through the weekend with western valley highs back near 100 degrees. Isolated mixed wet/dry thunderstorms move into northwest NV and portions of the west/central Idaho mountains on Saturday and Sunday. Wetter thunderstorms will continue through the weekend over the eastern half of the Great Basin.

#### Preparedness Levels

Great Basin	4
National	4

**Great Basin Fire Activity (from Irwin): Light Activity** 

New Fires and Acres: 15 fires for 150.25 acres 0 acres large fire growth

#### Resources:

Crews: 17 T1 IHCs in GB: 12 committed, 3 R&R, 2 available.

T2 IMT Team 4 – Roide is committed to the Missouri Fire.

T2 IMT Team 6 - Chadwick committed to the Preacher Fire

NW T2 IMT Johnson committed to the Mahogany and Leonard

GBCC has committed an estimated 76 + type 3, 4, 6 engines.

4-T1 and 6-T2 helicopters are available in GACC.

Creek Fires

### Great Basin Fire Potential Summary

Fuels continue to moisten across much of the region, as we are several days into monsoonal activity. The most rapid moistening is expected across Central and Eastern Nevada, where the most widespread precipitation has occurred over the past few days. Lighter fuels, represented by 10-hr FM will see the most rapid moistening over the next 2 days.

ERC's will remain critical over much of Idaho, but also will begin to edge downwards in response to the cooler, more humid conditions.

Fire danger remains elevated across far western and northern portions of the Great Basin, and it will be these areas that will dry out the quickest today into Friday. But more monsoonal moisture returns to the Great Basin this weekend, bringing a decrease in overall fire danger to many southern and central areas of the Great Basin this weekend. At the same time, a "High Risk" of large fire due to a mix of dry and wet lightning is still anticipated across the drier portions of far NW NV and parts of Wrn ID..

Sagebrush live fuel moisture, which has a much slower response time to short term precipitation, has been on a rapid downward trend the past few weeks in most areas, finally reaching near to just below normal mid-summer levels across the northern and western portions of the Great Basin. Sagebrush live fuel moisture across Central NV/Utah has dropped significantly to below normal and in some areas is approaching record lows.

We have issued a Great Basin *Fuels and Fire Behavior Advisory for Nevada and Utah*, available at the following link:

https://www.predictiveservices.nifc.gov/fuels fire-danger/GB Fuels and Fire Behavior Advisory.pdf
